**Innovating** means changing the world.

**And suddenly, lightweight means strong, flat means flexible, and contemporary becomes sustainable. Stretch coverings offer a single solution to a multitude of construction issues. After centuries of immobility, fabric coverings have set the world of walls and ceilings into motion and interior architecture and design found itself with a whole new dimension.**

Stretch coverings know no boundaries. They can roll out their talents anywhere, seamlessly covering vast surfaces. Stretched fabric is the ideal material everywhere ideas exist. It is an invitation to imagine what could be possible. At CLIPSO, our team is diligently working to rise to the challenge presented by our own products; a belief that "nothing is impossible" is the cornerstone of our business strategy now and going forward. In the face of both ecological and economic challenges, the word "impossible" is an invitation for us to prove the opposite. All of our products must be innovative. They will be marked as, "Made in France," which means they are manufactured with precision using only the best materials available.

As the industry leader for textile architecture, we have every intention of playing a leading role on an international level in creating a unique style for the 21st century. We are able to give fabric a perfect structure, allowing an unprecedented freedom for today's architects and interior designers. Now anything that does not need to be in three dimensions can become two, and the complex is simplified. Inspiration abounds!

Whether in classic colors or printed with bold extra large patterns, these elegantly chic lines and curves write a whole new page in the book of design. Our fabrics create an inspiring realm where function and fashion so brilliantly meet. The functional becomes aesthetic. And the aesthetic becomes functional. Anything is possible. Innovation means changing the world.

spaces now seem to want to move us.

## **Freedom: a liberty that CLIPSO has always taken.**

**How do you measure the importance of an innovation? You measure it by the speed at which it spreads. There's no greater proof of the significance of an innovation than a rapid success story. Starting from the heartlands of Europe, the saga of CLIPSO stretch ceilings and walls quickly conquered the world.**

The cold stretched fabric system developed by Bernard Geis, founder of CLIPSO, became a worldwide necessity in less than 20 years. This polyurethane-coated polyester knit fabric with amazing technical properties entered the market in 1997, about the same time as the smartphone. With a revolutionary new fastening system, CLIPSO stretch fabric, like the smartphone, seemed to have appeared out of nowhere. Yet its roots remain in the Alsace region. More precisely, Vieux-Thann and Saint-Amarin, long before Strasbourg, the heart and crossroad of Europe.

The cold stretch technique developed in the CLIPSO laboratories and factories would soon be giving the world's interior designers the freedom to overcome many existing challenges, just as the smartphone has brought unprecedented freedom to the world of communications.

All innovation comes from taking liberties. To win over the United States and Middle Eastern markets, CLIPSO stretch ceilings and walls have acquired multiple patents, approvals and certifications. Acoustic, antibacterial, water-repellent, translucent, printable, pearlescent, and framed, the possibilities and applications of CLIPSO stretch fabrics made in France are endless. They are infinitely customizable. They offer the freedom to be unique.

The quest to satisfy diverse interior design needs is a fine ambition, and an achievable one. In addition, CLIPSO strives for smart technological advancements that consistently improve the appeal and usability of our products.

Catherine Geis's vision for the development of the business she runs is anchored in a profound belief that it is natural to respect the environment. This "Sustainable Development" mentality is part of the firm's DNA and comes as part and parcel of every new product we develop. Our goal is for this mindset to go viral. That's a liberty that CLIPSO has always taken.
